

Open Teleprompter documentation

made by Ogan Özkul aka Ryuguu Chan

A screenshot of the Open Teleprompter application. It features a black background with the text "Open Teleprompt" in a white, monospaced font at the top left. Two white, right-pointing triangle markers are visible on the left and right sides of the screen, indicating the position of the text as it scrolls.

Open Teleprompt

The GUI

How to use it

All you have to do is opening the program. Then the program will be launched in fullscreen mode and will load the whole text from the file *text.txt*, you can then use the program by using the following keys.

The controls

Here are the controls in order to use the program.

Key	Use
+	Makes the scrolling speed higher
-	Makes the scrolling speed slower
Space	Pause the teleprompter
F5	Reload the <i>text.txt</i> file into the teleprompter
Up arrow	Move the teleprompt arrows upwards
Down arrow	Move the teleprompt arrows downwards
Enter	Stop the teleprompt
Esc	Close the teleprompter

text.txt

This is the file that all the text would have to be written on ! Which means that if it doesn't exist in the same folder that your program is. All you will see is the *Open Teleprompt* text and thus you would have to close it and create the file *text.txt* and then write your text on it.

First thing you have to do is writing the text and then saving it in the same directory where the executable itself is.

Nom	Modifié le	Type	Taille
open Teleprompter	07.11.2021 19:39	Application	28 Ko
text	07.11.2021 20:00	Document texte	1 Ko
